

Abstract:

The invention disclosed provides an improved ear protection system comprising an ear protection device and an innovative stowage device. The stowage device is
5 capable of inconspicuously securing the ear protection device to an easily accessible entity such as an article of clothing. The system is further able to accommodate various sizes and shapes of ear protection devices at varying distances and lengths from the user's ear.
10 Additionally incorporated in the ear protection system is a locking mechanism to control the extension and retraction of the ear protection device from the stowage device.
